

Grupo Werthein launched TRIA, a comprehensive telemedicine company that solves health management for companies and workers.

The [company](#) already provides services to more than 20,000 workers and has the capacity to operate anywhere in the world. It began operations in Argentina, with large companies as clients, and is about to launch in Brazil and Central America. The services are adapted to SMEs and corporations, including digital applications and artificial intelligence in technological solutions.

Buenos Aires, October 2, 2025. Grupo Werthein launched TRIA, a telemedicine company with an innovative online platform that solves the health management of both private companies and public organizations, with traceability on the situation of each worker and solutions in clinical medicine, pediatrics and mental wellness anywhere in the world, both in the face of circumstantial events and medium and long term chronic conditions.

With artificial intelligence incorporated into it, the platform allows the Human Resources and health management areas of the company to computerize, go paperless and systematize the health care of human capital, with accurate data and early alerts that help predict pathologies, promote better care measures for workers and manage leaves of absence, which results in an increase in the physical and psychological wellbeing of workers, and has a positive impact on productivity.

With TRIA, companies have access to a comprehensive and superior solution with which they can consolidate the results of medical eventualities, monitor treatments and obtain real-time statistics on medical history, habits and work accidents, as well as facilitating the control of leaves of absence due to illness or accident.

This system, which provides electronic medical records and teleconsultations, is already used by large companies such as Aeropuertos Argentina 2000, DIRECTV Latin America, Experta Seguros and other companies, providing services to a global workforce of more than 20,000 workers.

Darío Durand, president of [TRIA](#), explained: "The company has proven experience in caring for workers through technological tools that Grupo Werthein has been applying for decades to take care of each of its companies' collaborators".

Guillermo Schor-Landman, director of TRIA, indicated that the new company already has solid alliances with renowned institutions of the highest international level in terms of the quality of their medical services.

"TRIA is a key tool to help employers focus on the care of their human capital, with the versatility to empathize with each particular situation and seek solutions. It is a novel proposal due to the comprehensiveness of its benefits," added Durand.

TRIA's portal provides access to electronic medical records; management of practices, with online reception of orders, authorizations and choice of provider; requesting and coordinating appointments; performing audits in real time; and centralizing pharmacy operations, with the possibility of issuing electronic prescriptions.

It also complements all these functions with the development of statistics, analysis and health alerts in real time, enabling informed decision making and the execution of preventive medicine, with the objective of taking care of workers in a better and more efficient way.

An online solution for patients, doctors and companies

TRIA includes a series of modules, most notably Teleconsultation, which enables remote care with the occupational physician and facilitates assistance between professionals, ensuring secure communication at any time and place.

For patients, TRIA Paciente is an exclusive web portal that allows them to access their medical records, manage appointments, check emergency data and make medical teleconsultations from any device with an Internet connection.

The use of TRIA's online platform does not require investment in hardware and allows a gradual implementation and adaptations according to the client's processes. In addition, it guarantees the confidentiality of sensitive data through profile-based access credentials.

With TRIA, Grupo Werthein reaffirms its commitment to innovation and technological advancement in the healthcare sector, offering a robust, secure and efficient solution that positively impacts people's quality of life and wellbeing.
